Sealing  Solutions

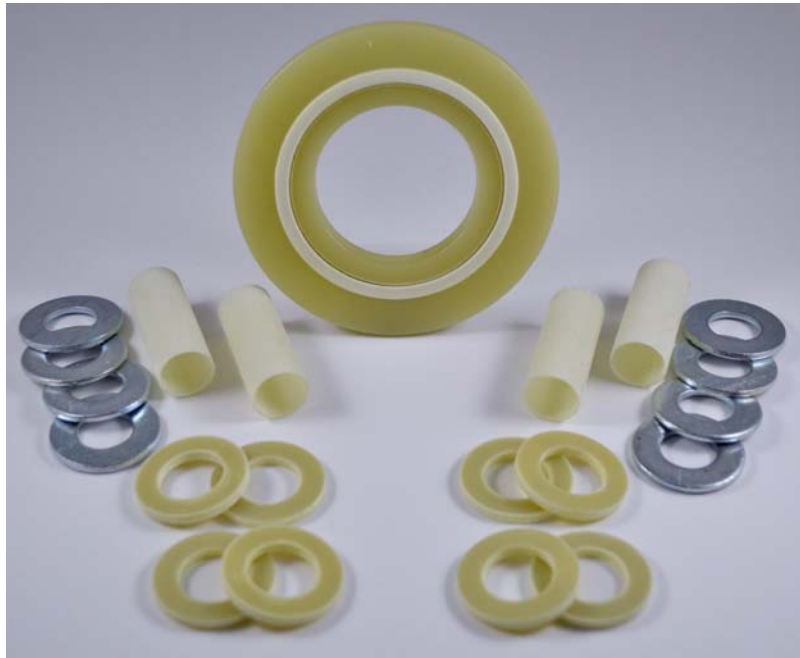

RAMCORE HT FLANGE INSULATION GASKET KIT

RAMCO® SEALING SOLUTIONS manufactures the **RAMCORE HT Flange Insulation Gasket Kit** for Critical Service applications, with elevated temperature, continuous movement, internal pressure surges and frequent removal and installation such as those found in Offshore Drilling platforms and Natural Gas Compressor/Pumping Stations.

The **RAMCORE HT** gasket is manufactured from ¼” thick Nema grade G-10 glass epoxy incorporating a Spring Energized PTFE Sealing element to prevent cold flow of the sealing element under extreme pressures making this gasket ideal for installation in ANSI 150# to 2500# and API 3K to 10K or all international equivalents.

The **RAMCORE HT** Flange Insulation Gasket Kit is available for all piping sizes from ½” - 24” nominal pipe size, or international equivalent in Full Face (E) or Raised face (F).

The **RAMCORE HT** Flange Isolation Gasket Kit consists of all components necessary to insulate a flange connection while providing required flange sealing and cathodic protection. Each Insulation Kit comes standard with one RAMCORE HT gasket, two isolating NEMA grade G-10 washers, two SAE zinc plated steel backup washers and one NEMA grade G-10 sleeve tube per bolthole.

Ramco® Sealing Solutions products are proudly manufactured in the USA and are fabricated from the highest quality materials to exceed industry standards.
